

Uniden D1483-3BK Handset Case Separation

Prerequisite only.

Written By: Arbitrary Name

TOOLS:

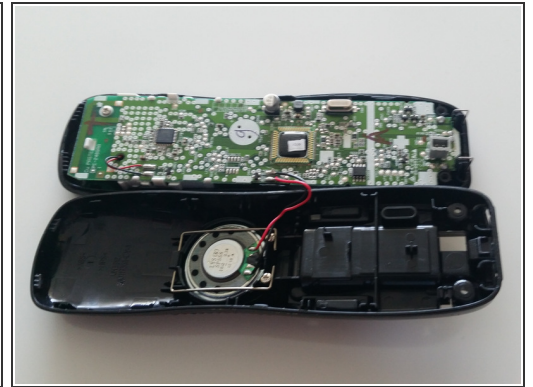

- [Phillips #1 Screwdriver](#) (1)
 - [iFixit Opening Tools](#) (1)
-

Step 1 — Handset Case

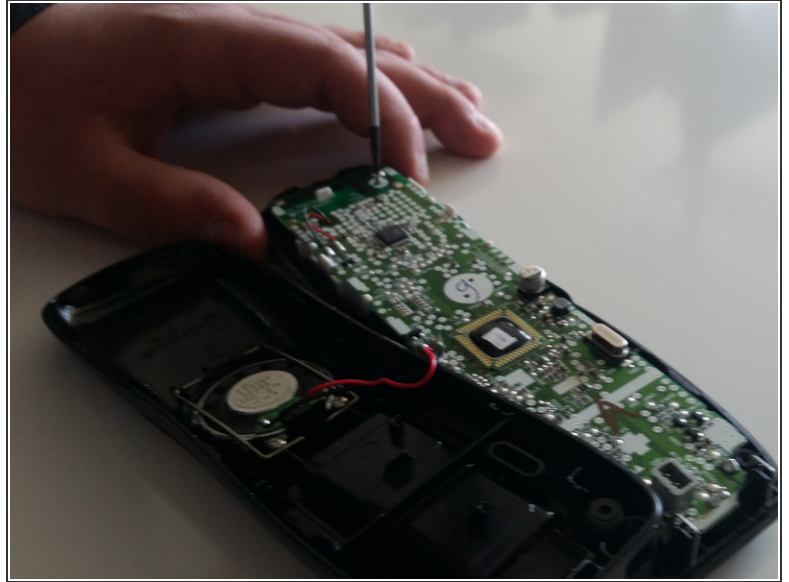

- Remove the two 9mm Phillips #1 screws in the battery compartment.

Step 2

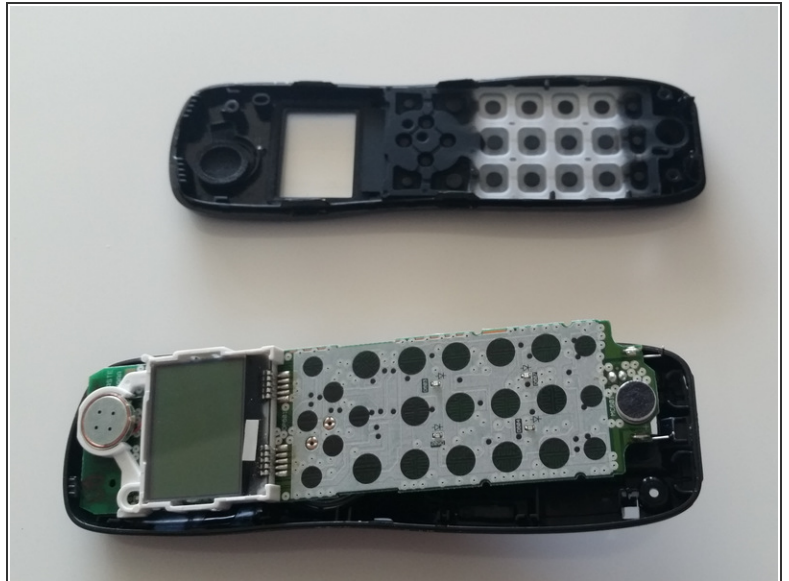

- Use the plastic opening tool to carefully separate the two halves of the case.
 - Slowly work around the entire case to fully separate the halves before pulling them apart.
- ⚠ Wires inside the case hold the two halves together, tearing these wires will lead to a need for additional repair.

Step 3

- Carefully remove the 9mm Phillips #1 screw from the top corner of the circuit board.

Step 4

- Carefully grasp either side of the circuit board and lift it straight out of the front half of the case.
- Set the board in the lower half of the case.

To reassemble your device, follow these instructions in reverse order.
